## ELECTRONIC LOGGING DEVICE (ELD) Helpful information to assist you in choosing a system right for your requirements

An Electronic Logging Device (ELD) is an electronic device designed to comply with FMCSA's criteria to accurately record a drivers driving time for Hours of Service compliance. The International Registration Plan (IRP) and the International Fuel Tax Agreement (IFTA) each allow the use of electronic devices to document vehicle distance by jurisdiction provided the required supporting data are maintained for audit purposes.

The purchase of an ELD does not necessarily mean it will be compliant for IFTA and IRP purposes or vice versa. Beware of vendors stating that their systems are IFTA or IRP certified. There is no such certification. See the chart below for some of the key differences and similarities between an ELD and a compliant IFTA/IRP electronic records device.

and distance recording requirements.  • Every 60 minutes • Every change of duty status • Engine on/Off at a precision of one mile when On-Duty and 10 miles when On-Duty and 1	DISTANCE DATA Collection Elements	Electronic Logging Device (ELD) For Reporting Hours of Service	Electronic Logging Device (ELD) IFTA / IRP Compliant
and distance recording requirements.  • Every 6D minutes • Every 6 change of duty status • Engine on/Off at a precision of one mile when On-Duty and 10 miles are sequired  Not Required  Not Required  Required  Not Re		Required	Required
